# Constructor fn

normal fn → "new" keyword → create objects

function sam() {
 ...
 } Constructor fn

let p1 = new sam()

① points to sam()
 ② points to new

ES6

privatisation

Classes

"Syntactical sugar of
constructor fn"

sugar coating

Butterflying

finish

```
class Vohua {  
  constructor () {  
    ===  
  }  
}
```

Syntax

{ }

{ }

✓

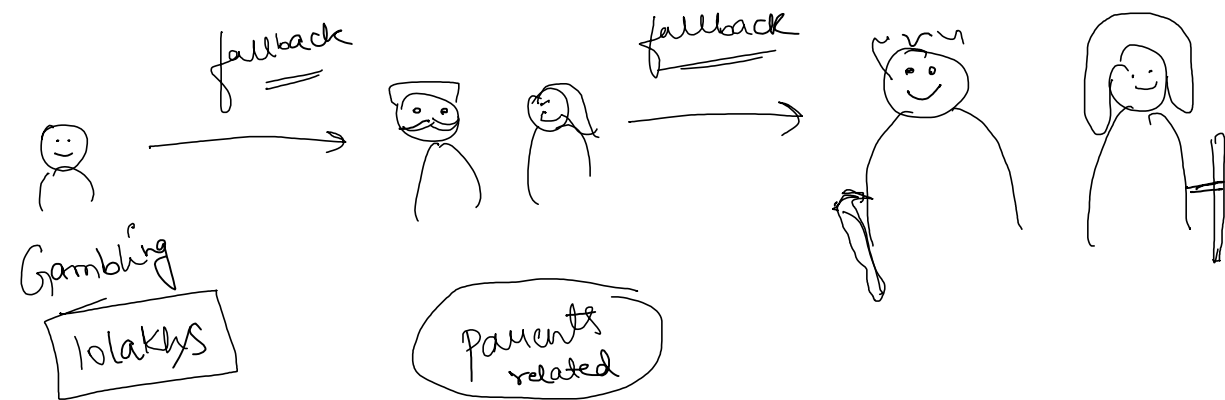

✓

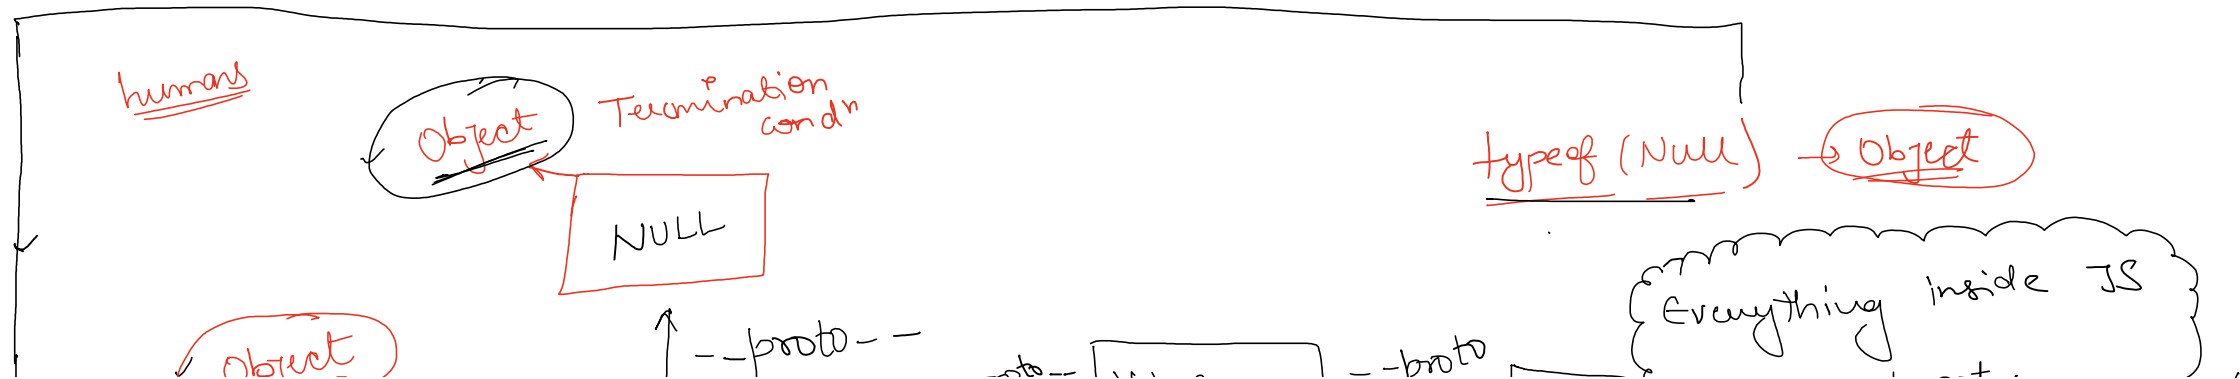

Three hand-drawn curves, each followed by a large handwritten 'X', indicating they are incorrect.

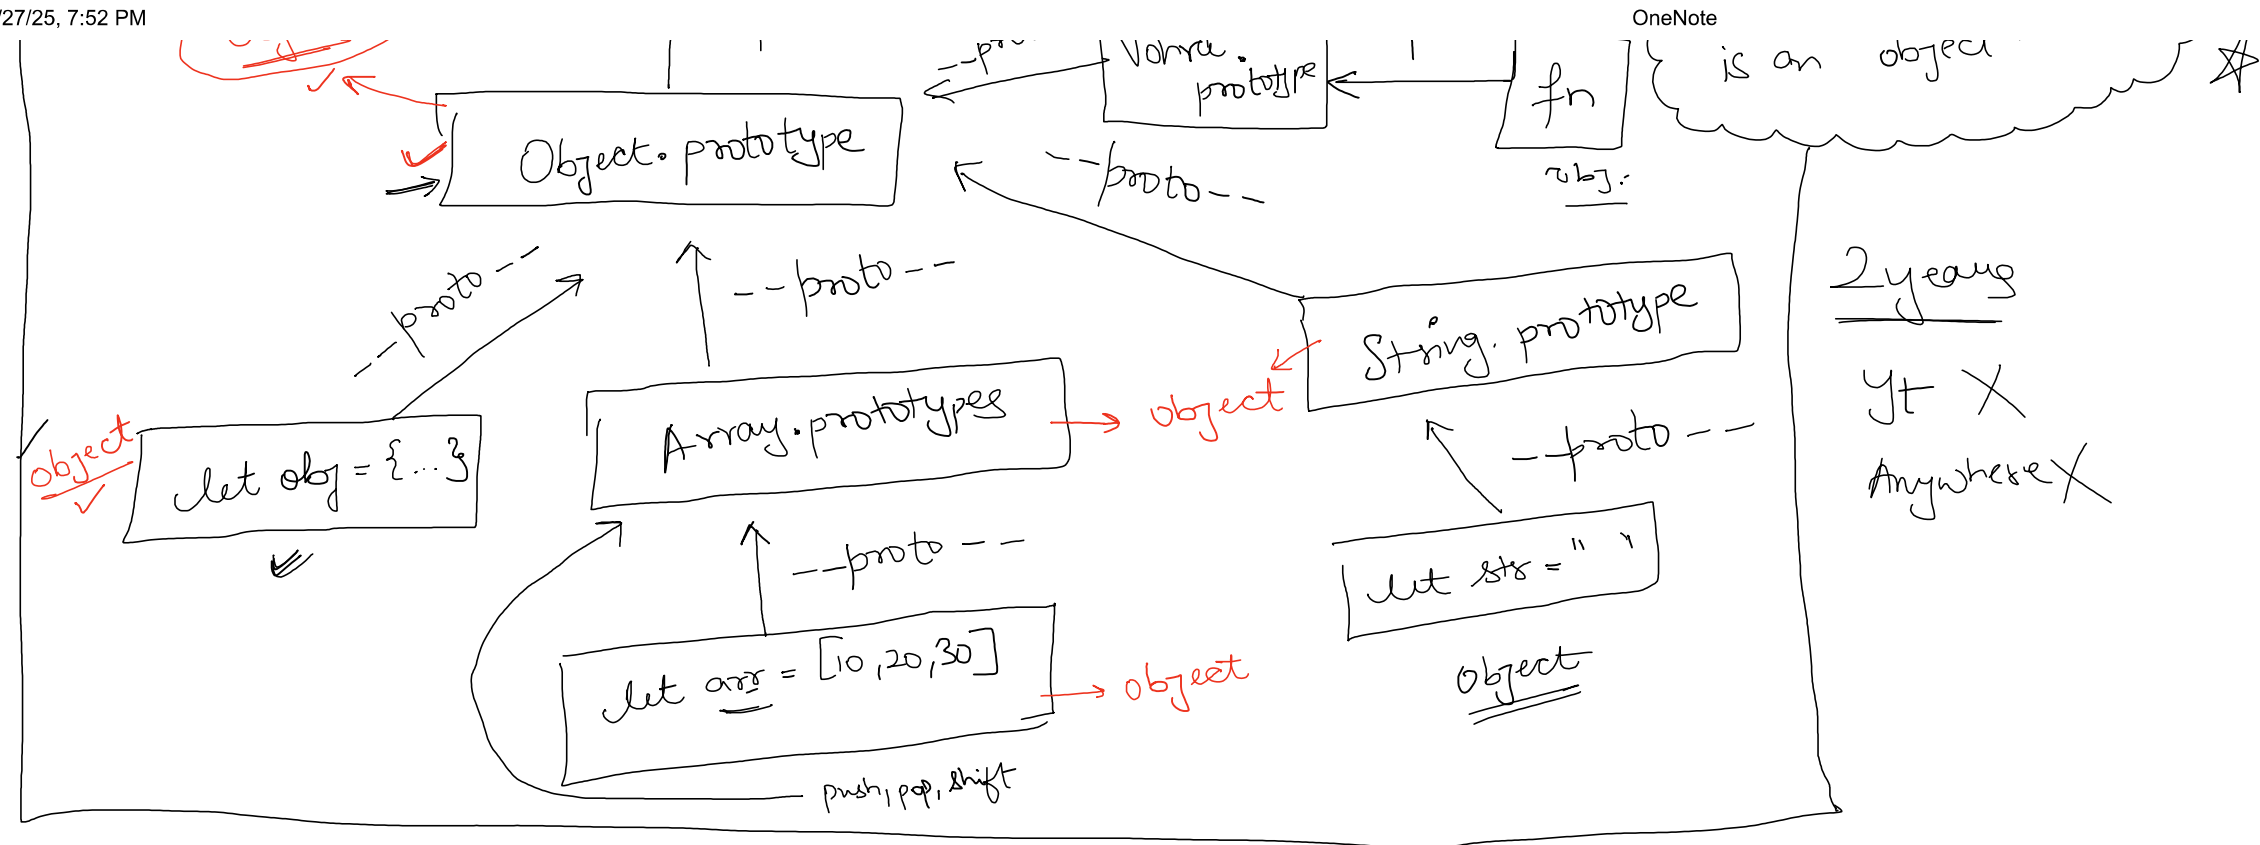

Prototypes

Are Objects, which acts like a fallback source to your objects.

-- proto -- (dendren proto)
(checks parent)
